

FIGURE 1 : Number of people with the given condition out of an original population of 275 exposed to hepatitis C (HCV).⁶

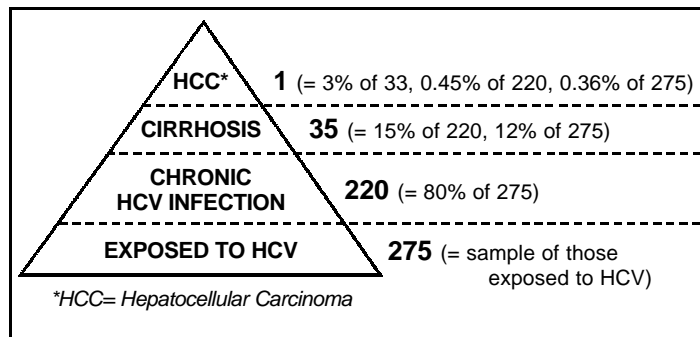

FIGURE 2: Percentage of inmates with HCV infection (HEPP Study, 2002)⁷

States participating in a HEPP phone survey earlier this year reported the following estimates of HCV prevalence. The data for each state is collected using different measures. (S*= Suppressed)

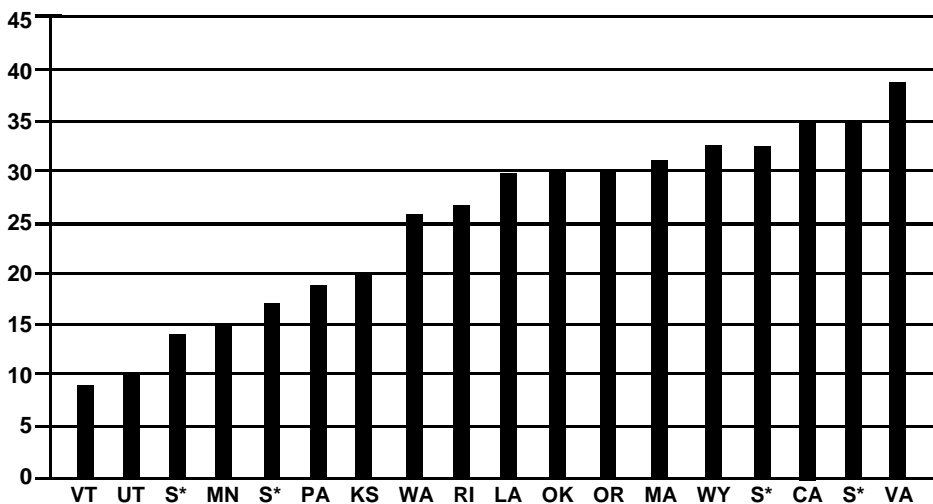

FIGURE 3: The Change in Balance: Treatment of HCV in an HIV-Coinfected Patient

A reversal from the recommendations in 1997, in 2002, the benefits of HCV treatment in HIV-coinfected patients appear to outweigh the drawbacks.
